⚠ Crawl Control - ADD?

.....If you have trouble... this quote from Coinball may help.

"To get the VSC light to go away (in lieu of making another video), you need to press the Crawl Control on/off button BEFORE clicking the final Exit button in the ABS test. You'll get the warning the CC isn't available unless you're in P or D and 4L (on the cluster display), and you'll be good to go from there."

=====

FAQ for adding Crawl Control and MTS (last updated 10.31.2018)

- MTS and/or Crawl can be added to any model year or trim GX 460
- MTS can be installed by itself - plug and play module swap
- Crawl can be installed by itself - in addition to console switch you need to do a [zero point calibration](https://www.clublexus.com/forums/attachments/gx-2nd-gen-2010-present/473989d1517870509-dac-versus-crawl-control-calibration.pdf) (<https://www.clublexus.com/forums/attachments/gx-2nd-gen-2010-present/473989d1517870509-dac-versus-crawl-control-calibration.pdf>).
- Crawl and MTS can obviously be installed together as well.
- MTS is NOT included with US 460's optioned with Crawl Control but Canadian top tier models include MTS with their Crawl optioned models
- If you don't have adaptive suspension (AVS) or rear air bags AHC on your 460 you will end up with two dummy switches. [Here is an option that Nickk6 did on his.](https://www.clublexus.com/forums/gx-2nd-gen-2010-present/859762-dac-versus-crawl-control-43.html#post10234535) (<https://www.clublexus.com/forums/gx-2nd-gen-2010-present/859762-dac-versus-crawl-control-43.html#post10234535>).
